

# MIRRORS PROGRAM

A Plant Motor Management & Inventory Management System

## MIRRORS - Motor Inventory Repair Replace On-site Retrieval System

Motor management should include every aspect of a motor's life, from the time it is purchased until it is retired and everything in between (maintenance, repairs, rebuilds). Our motor management team will work with you to conduct a complete inspection of all motors in your plant, both in and out of service. Our specialists will examine your needs to determine whether spare motors need repairs, eliminate any excess inventory, and catalog your motors. We go beyond where your motors are located to provide you a motor room stocked with both repaired motors and New Energy Efficient models. This frees up warehouse space as well as reduce your business' maintenance and operation costs.

### HOW DOES IT WORK?

- Remove excess spare motors and obsolete/damaged motors
- Remaining motors are repaired to a new higher specification, lasting longer
- Color coded retrieval tags and organizational system
- New purchased high quality/efficiency motors to fill gaps in inventory
- Dedicated area within the facility or off site for the motor stocking
- New consignment motors can be supplied
