COMPREHENSIVE ENERGY OPTIMIZATION SOLUTIONS

for Industrial/Commercial Facilities,
Motor Upgrades & Energy Retrofits

MOTOR-UP PROGRAM

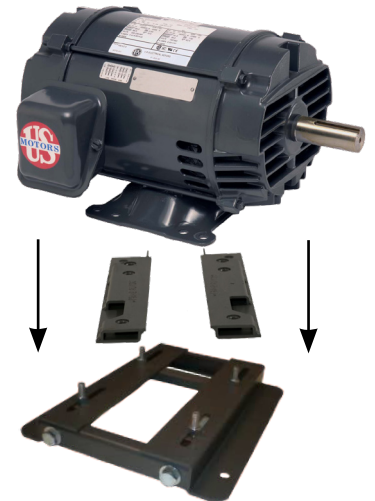

A Plant Motor Efficiency & Maintenance Management System

MOTOR-UP = Facility **Motor Upgrades**, Right sizing, Enhancements, Efficiency Boosting, Maintenance Project Management

MOTOR-UP OVERVIEW

Industrial motors are built for long term use; however, over time components begin to wear, downtime increases, parts become obsolete, and the operational equipment effectiveness (OEE) plummets. Energy efficiency motors can offer increased productivity and reduced operation costs. The process of retrofitting older equipment to new, efficient technology can be complex.

Here at Rexel Energy Solutions, we oversee the entire retrofit project to ensure all aspects of the retrofit are tailored to your exact needs. When available, we will help you find incentives to help reduce costs of facility upgrades.

PROGRAM FEATURES

- Future downtime reduced
- Energy Saver design
- Motor transition/mounting bases provided
- Installation and removal services
- Thermography services
- Motors ratings right-sized
- **Motor peripherals:** belts/sheaves, couplings, etc.
- **Motor options:** AEGIS RINGS, Name Plating/TAGS, space heaters
